Nov 2024

Instagram Clone

Backend developer

Description:

 The backend of the Instagram Clone project is designed to provide APIs for user management, posts, comments, and likes. The system supports user authentication (JWT), image upload, and storage on the cloud or local servers. Data is stored and managed in relational database such as MySQL. The RESTful API architecture ensures scalability and seamless integration with the frontend.

Role in the project:

 Designing the database, structuring the backend, configuring backend services, and implementing key features such as user registration and login, posting, liking, commenting, and viewing profiles.

BACKGROUND/CAREER OBJECTIVES

As a third-year IT student specializing in Java Backend Development, I have a solid foundation in Java, Hibernate, Spring Boot, SQL. My strengths lie in calmly solving problems, working effectively in teams, quickly adapting to new environments, and maintaining a strong eagerness to learn. I am seeking opportunities to apply my knowledge to real-world projects, gain valuable experience from industry experts, and contribute to the company's growth while moving closer to my goal of becoming a Fresher Java Backend Developer.

LANGUAGE

- o English
- Vietnamese

Technology used:

 Backend: Java Spring-boot, Spring Security, JWT, JPA, Hibernate, MYSQL
